Quarterly Activities Report March 2017

Outstanding Drilling Results in March Quarter Underpin Leonora Gold Project

HIGHLIGHTS

- Outstanding drill results from multiple deposits at the Cardinia Mining Centre
 - Results at the Helens deposits well above expectations
 - Shallow, high-grade gold mineralisation at the new Fiona Prospect
 - Bonanza gold strike at East Lynne Prospect (up to 622g/t Au)
- DFS progressing well, will incorporate new discoveries
- Board restructured to prepare Kin for project development
- Placement raised A\$750,000, SPP raised ~\$1.3M (before shortfall)

Kin Mining NL (ASX: KIN) is pleased to present its quarterly activities report for the period ended 31 March 2017.

The focus during the quarter was advancing the Definitive Feasibility Study (DFS), conducting infill and extensional (growth) drilling, and continuing with numerous activities related to the development of the 100% owned Leonora Gold Project (LGP) in the North-Eastern Goldfields of Western Australia.

During the quarter, Kin made strong progress on the DFS. The Company completed the Merton's Reward and Mertondale 3-4 infill and extensional drilling early in the quarter, intersecting wide zones of mineralisation containing high-grade zones within and outside the planned open pit mine designs (37m @ 3.0g/t Au, including a high-grade zone of 6m @ 10.7g/t Au). The successful drilling highlighted the outstanding potential of the Mertondale system, which remains open along strike and at depth.

Reverse Circulation (RC) drilling then shifted to the shallow oxide Cardinia deposits, first focusing on the Kyte deposit to convert Inferred Resources into the higher confidence Indicated Resource category. High-grade, near surface drill results were received from Kyte (up to 1m @ 19g/t Au), before the drill rig moved to the nearby Rangoon deposit for further infill drilling.

The Rangoon program returned a majority of drill holes containing assays in excess of 1g/t Au, confirming the robust nature of the shallow gold mineralisation at the deposit. A second RC drill rig was then mobilised, along with a diamond drill rig to collect drill core samples for metallurgical and geotechnical investigations.

A highlight of the quarter was a bonanza gold strike at the East Lynne Prospect, within the Cardinia Mining Centre. The results included exceptionally high gold grades from surface with assays of up to 1m @ 622g/t Au.

A new shallow high-grade gold discovery with hits up to 1m @ 283g/t Au was made at the Fiona Prospect, also within the Cardinia Mining Centre. The Company considers it likely that the Fiona prospect will contribute significant resource ounces of gold to the LGP.

The Company topped off the March quarter with RC drilling at the Helens deposits. Consistent shallow and high-grade mineralisation was intersected over extensive strike length. The drilling at Helens returned the best results the Company had achieved at that time, given the consistency and grade of the mineralisation.

Mr Don Harper, Kin's Managing Director, said,

"The March quarter has been an exciting one for Kin. We drilled the best intersections in the history of the Company, with consistently thick and high-grade near surface mineralisation intersected at the Helens deposits. We also discovered the Fiona Prospect, which contains excellent grades up to 283 g/t Au, and is near surface, open at depth and along strike followed by exceptionally high-grade intersection of 622 g/t Au at the East Lynne prospect."

"Other resource areas drilled were Mertondale, Kyte, and Rangoon, which all returned results in line with or better than expected. We anticipate that these drilling results will reflect positively on the updated Mineral Resource estimate and maiden Ore Reserve, due for release in coming months as part of the DFS."

"The DFS is progressing well, with metallurgical testwork underway, geotechnical work commencing, and ongoing optimisation of our proposed mining and processing plan. Approvals for the project are also progressing well. We were pleased with the due diligence report on the suitability of the Lawlers Processing Plant and have since moved to purchase the plant from Goldfields."

"It's full speed ahead for Kin, with the DFS and ongoing drilling within the exciting Cardinia Mining Centre – with further news to come," Mr Harper said.

LEONORA GOLD PROJECT (100%)

Kin's immediate focus continues to be development of its 100% owned Leonora Gold Project (LGP), which contains a JORC resource of 721koz Au (see attached Resource table).

RESOURCE DEFINITION DRILLING & EXPLORATION

One of Kin's major advantages is that it is not a single-project company. The Company has a number of projects at various stages of maturity, comprising short-term production opportunities, enhancement of existing Resources with a view to larger scale production, and exploration projects that range from advanced to early stages (Figure 1).

Helens

In early April, Kin announced some of the most consistent, high-grade intersections in the history of the Company, at the Helens deposits. The drilling of the Helens deposits was undertaken during March, although the final announcement of the results was on 3 April 2017.

A total of 59 RC drill holes were completed for a total of 2,849m. Of the 59 holes, only two failed to achieve gold mineralisation over 0.5g/t Au, and multiple wide zones of gold mineralisation were encountered over a significant strike length.

A large number of drill holes intersected significant widths of gold mineralisation, the best of which were:

- 24m @ 5.7g/t Au (0 - 24m) HE17RC009 incl. 1m @ 100g/t Au
- 15m @ 3.7g/t Au (1 - 16m) HE17RC020 incl. 9m @ 5.4g/t Au
- 8m @ 7.0g/t Au (26 - 34m) HS17RC015 incl. 2m @ 20.3g/t Au
- 12m @ 5.8g/t Au (2 - 14m) HE17RC022) incl. 5m @ 10.7g/t Au
- 30m @ 2.2g/t Au (23 - 53m) HE17RC002 incl. 6m @ 3.3g/t Au
- 12m @ 3.2g/t Au (38 - 50m) HE17RC049 incl. 5m @ 6.1g/t Au
- 11m @ 3.2g/t Au (39 - 50m) HS17RC019 incl. 5m @ 4.4g/t Au
- 28m @ 1.8g/t Au (0 - 28m) HE17RC044 incl. 7m @ 4.2g/t Au

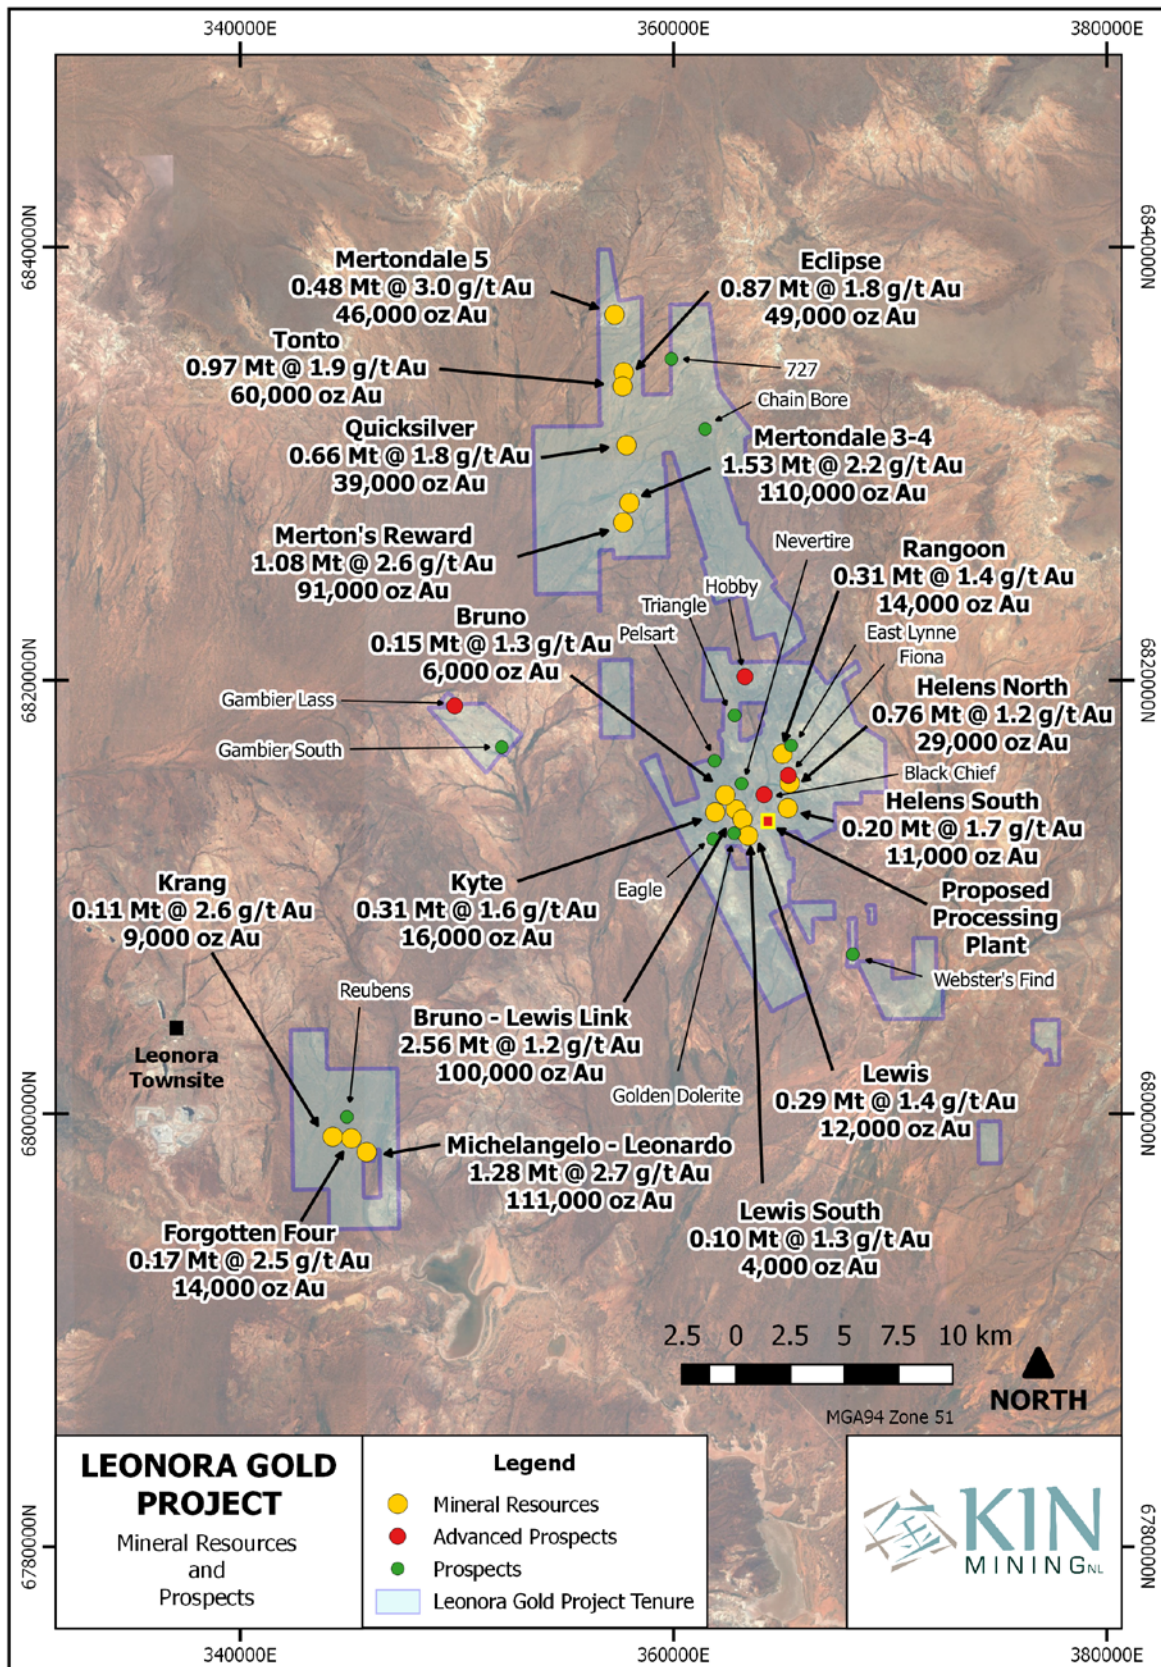

Figure 1: Plan of the Leonora Gold Project Mineral Resources and Prospects

Drilling in the Helens area consistently returned gold grades that exceed the current Mineral Resource grades, suggesting that there may be upside for the deposits. The drilling also showed the presence of significant bedrock gold mineralisation, which is open in multiple directions and provides targets for additional resource and exploration drilling. An additional 3,000m of RC drilling has been planned to extend the mineralisation at the Helens deposits, which has commenced. Results from this drilling are expected by the end of May.

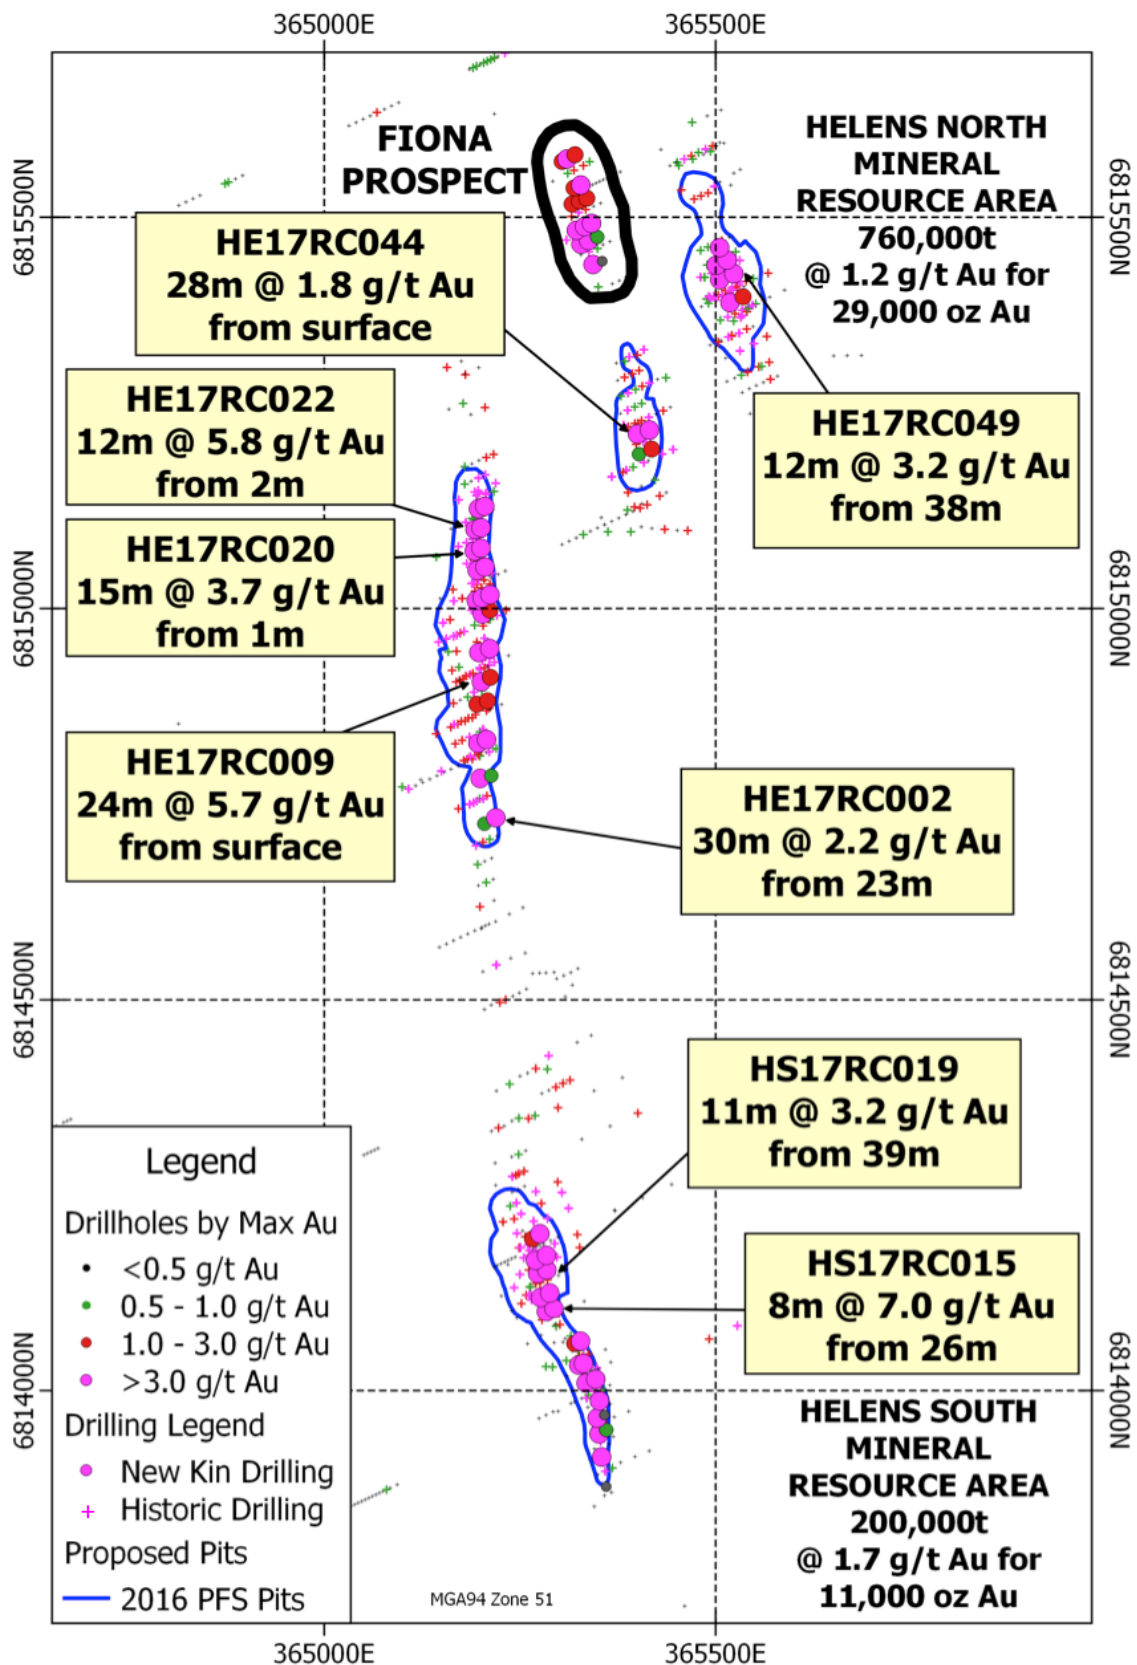

Figure 2: Recent Drilling at Helens, showing a selection of the outstanding intersections returned to date

Fiona Prospect

On 23 March 2017, Kin announced that drilling intersected multiple intervals of shallow high-grade gold mineralisation at the new Fiona Prospect, located within the Cardinia Mining Centre at the Company's Leonora Gold Project (LGP), WA.

The mineralisation intersected was near surface and highlights the potential for additional gold to be discovered outside Kin's known Mineral Resources at Cardinia. Drilling was carried out to follow up historic gold intersections in an area along strike to the north of the Helens North Resource, which currently stands at 760,000t @ 1.2g/t Au for 29,000oz Au. A total of sixteen reverse circulation (RC) drill holes were completed at Fiona for a total of 720m.

The best results from the Fiona Prospect to date include:

- **8m @ 51.4g/t Au** (10 - 18m) HE17RC028 incl. 4m @ 101.4g/t Au
- **9m @ 6.1g/t Au** (21 - 30m) HE17RC026 incl. 3m @ 12.0g/t Au
- **10m @ 3.6g/t Au** (25 - 35m) HE17RC033 incl. 1m @ 14.16g/t Au
- **4m @ 7.4g/t Au** (10 - 14m) HE17RC031

Gold mineralisation currently extends for 170m along strike and is open to both the north and south. Fourteen of the 16 holes drilled at Fiona intersected significant gold grades of over 1g/t Au and eight holes returned assays over 5g/t Au. Maximum drilling depth to date is only 45m true depth.

The Fiona Prospect is located within the Helens-Rangoon mineralised corridor in the east of the Cardinia Mining Centre, which contains the Helens and Rangoon Mineral Resources (1.27Mt @ 1.3g/t Au for 53,900oz Au), along with the East Lynne Prospect. Fiona is located 100m to the north of the Helens North Mineral Resource, and is covered by a granted Mining Lease. The new results at the Fiona Prospect, along with those recently announced from East Lynne, demonstrate that the Helens-Rangoon corridor has the potential to host additional shallow high-grade gold deposits.

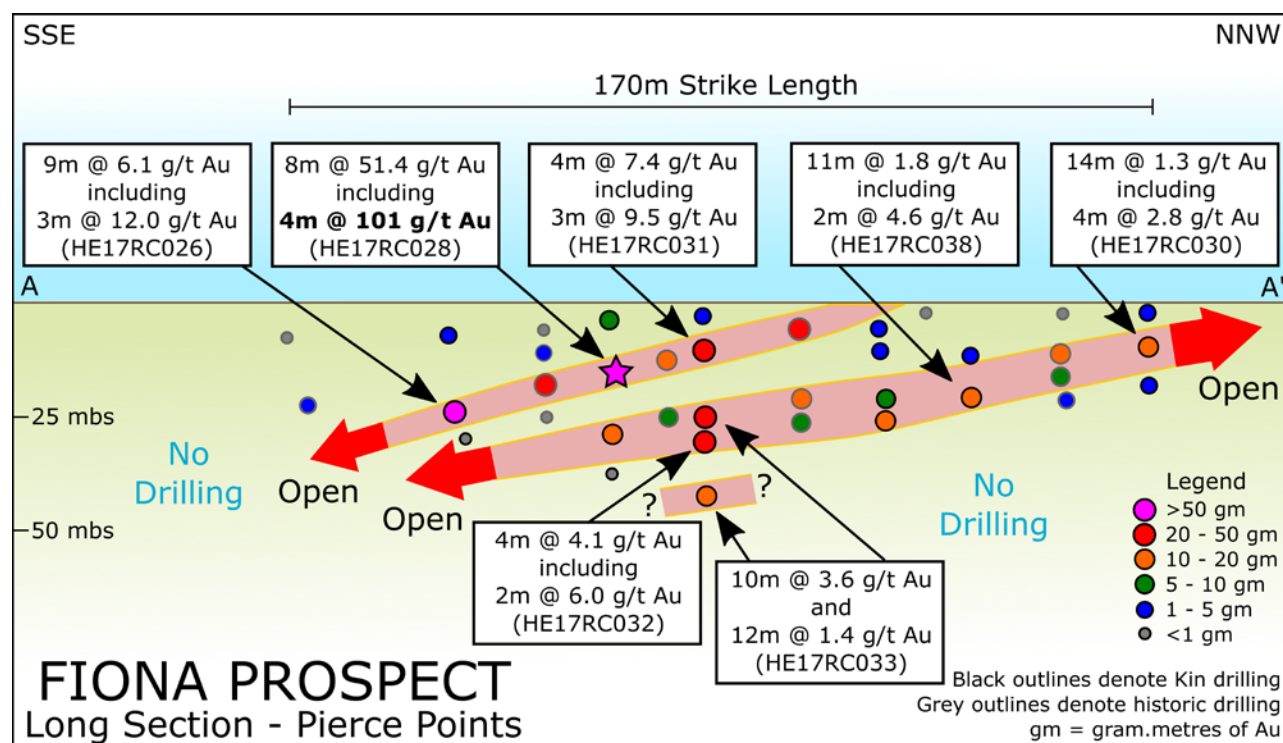

Figure 3: Fiona Prospect long section showing drill hole pierce points

In light of these results, Kin has planned further drilling at Fiona with a view to including the prospect in the LGP Feasibility Study, scheduled for completion in the September 2017 quarter.

Merton's Reward & Mertondale 3-4

Early in the quarter, Kin completed the Merton's Reward and Mertondale 3-4 infill and extensional drilling intersecting wide zones of mineralisation with high-grade zones within and outside the planned open pit mine designs (37m @ 3.0g/t Au, including a high-grade zone of 6m @ 10.7g/t Au). The successful drilling highlighted the outstanding potential of the Mertondale system, which is open along strike and at depth.

The best intersections returned at Merton's Rewards were:

- **10m @ 4.2g/t Au** (57 - 67m) MR15RC002 incl. 5m @ 8.0g/t Au
- **27m @ 2.7g/t Au** (66 - 93m) MR16RC004 incl. 2m @ 16.5g/t Au and 5m @ 5.5 g/t Au
- **22m @ 2.7g/t Au** (74 - 96m) MR16RC011 incl. 8m @ 4.7g/t Au
- **23m @ 2.1g/t Au** (57 - 80m) MR16RC020 incl. 3m @ 6.4g/t Au

And at Mertondale 3:

- **37m @ 3.0g/t Au** (142 - 179m) MT16RC034 incl. 6m @ 10.7g/t Au
- **40m @ 1.5g/t Au** (106 - 146m) MT16RC035 incl. 16m @ 2.3g/t Au
- **21m @ 2.5g/t Au** (95 - 116m) MT16RC014 incl. 10m @ 3.0g/t Au
- **18m @ 3.0g/t Au** (99 - 117m) MT16RC033 incl. 3m @ 10.9g/t Au

The Merton's Reward underground gold mine was mined at the turn of last century producing 60,524oz Au at an average grade of 21g/t Au, making it one of the richest underground gold mines in the Eastern Goldfields.

The Mertondale 3-4 open pit historically produced an estimated 179,300oz of gold from 1.30Mt of ore at a recovered grade of 4.3g/t Au. The current mine plan includes an extension or cutback to the south of this historical pit. Drilling during the quarter targeted this southern pit extension.

Resource interpretation is currently underway.

Kyte

On 9 February 2017, Kin announced high-grade near surface drilling results from the Kyte deposit at the LGP (see 9 February 2017 ASX release), with results of up to 19g/t Au. The positive results came from both inside and outside the planned open pit at Kyte and when combined with the free-digging, low strip ratio nature of the deposit, highlighted its potential to be an early source of high margin mill feed for the project.

The best intersections from the Kyte drilling were:

- **6m @ 8.8g/t Au** (0 - 6m) KY17RC010 incl. 4m @ 12.3g/t Au and 1m @ 19.3g/t Au
- **21m @ 2.3g/t Au** (11 - 32m) KY17RC015 incl. 8m @ 4.4g/t Au
- **15m @ 2.6g/t Au** (4 - 19m) KY17RC029 incl. 3m @ 6.7g/t Au and 1m @ 15.2g/t Au
- **10m @ 3.4g/t Au** (10 - 20m) KY17RC045 incl. 2m @ 12.2g/t Au

Figure 4: Drilling operations at Kyte

Rangoon

On 22 February 2017, Kin announced it had received strong assay results from the Rangoon deposit, part of the proposed Cardinia Mining Centre, grading up to 24.7g/t Au.

The best results from Rangoon were:

- **6m @ 8.4g/t Au** (17 - 23m) RN17RC025 incl. 3m @ 16.3g/t Au and 1m @ 24.7g/t Au
- **10m @ 3.8g/t Au** (19 - 29m) RN17RC040 incl. 2m @ 12.7g/t Au
- **21m @ 1.7g/t Au** (0 - 21m) RN17RC009 incl. 3m @ 4.7g/t Au
- **10m @ 3.7g/t Au** (8 - 18m) RN17RC017 incl. 3m @ 10.2g/t Au and 1m @ 23.7g/t Au

The encouraging results included shallow intersections, which come from both inside and outside the planned open pit. The presence of shallow gold mineralisation highlights the potential for Rangoon to contribute mill

feed early in the life of the project.

The Rangoon deposit is relatively shallow and is expected, based on the weathering identified in this and previous drilling programs, to be a substantially free-dig mining operation. The deposit contains oxide and transitional ores, and currently has a Mineral Resource of 310kt @ 1.4g/t Au for 14,000oz Au. The Rangoon deposit forms part of the larger Cardinia resource area, which currently contains 4.86Mt @ 1.3g/t Au for 192,000oz.

East Lynne

A highlight of the quarter was a bonanza gold strike at the East Lynne Prospect, within the Cardinia Mining Centre. The results included exceptionally high gold grades from surface with assays of up to 622g/t Au (see 8 March 2017 ASX Announcement).

Historic mining at the East Lynne Prospect recorded production of 1,242t @ 47.5g/t Au between 1897-1906, and in 1942, for a total of 1,896oz Au (including dollied material). Despite this history of high-grade production, no Mineral Resource has been defined at East Lynne, as previous drilling was sparse and shallow in nature. Kin identified East Lynne as a walk-up target, and took the opportunity to conduct a four-hole scout drilling program at the prospect while a drill rig was in the area.

Following this exciting result, Kin management undertook a site visit. A portion of the high-grade sample was sieved and panned to assess the coarse gold component. The results of this work were that from one sieve (approximately 0.5kg of material) taken from the 0-1 m sample of hole EL17RC003, a number of gold nuggets were recovered, weighing 1.7g in total, along with specimen stone of gold in quartz. The fines were panned to give a spectacular tail of gold in the pan (Figure 5).

The high-grade result was located on strike of the historic East Lynne workings, between the main shaft (85m depth) and other workings, which extend along strike for approximately 150m.

Figure 5: Gold tail in plan from East Lynne Prospect, from about 0.5kg of material

LGP Mineral Resource Update

Following on from the resource drilling, the new data are being interpreted and subject to geological modelling. This process, being undertaken by consultants Carras Mining Pty Ltd, in close consultation with the Kin Mining geological team, will ultimately lead to a revised Mineral Resource estimate for the LGP, and a maiden Ore Reserve for the Company, to be released with the DFS.

LAWLERS PROCESSING FACILITY

In November 2016, Kin announced it had signed an exclusivity agreement with respect to the possible acquisition of the Lawlers processing plant from Gold Fields Limited. The plant, which has been on care and maintenance for 21 months, has a capacity of ~800,000 tpa of hard rock, making it potentially ideal for use at the LGP.

During the quarter, Kin appointed Como Engineers to complete a Study on the suitability of the Lawlers Processing Plant, including capital and operating cost estimates. Upon finalising the acquisition, Kin would plan to relocate the key process items and infrastructure to the central Cardinia Mining Centre, where the bulk

of the ore feed is to be mined. Subsequent to the end of the quarter, Kin has recently announced that the Company has proceeded to an Option to Purchase the Lawlers Processing Facility (see ASX announcement 26 April 2017).

Figure 6: Two photographs of the Lawlers Processing Plant, over which Kin has an Option to Purchase

LGP DEFINITIVE FEASIBILITY STUDY (DFS)

Based on strong outcomes of the Pre-Feasibility Study results (see ASX announcement 15 December 2016), Kin commenced a DFS for the LGP. In addition to the Resource drilling, Kin has progressed several other aspects of the Project with the aim of releasing the DFS during the September 2017 quarter.

IMO Consulting was appointed to complete the metallurgical testwork, which commenced during the quarter and is progressing to plan.

The Company is currently progressing geotechnical and further environmental work to support the DFS, which will form the basis for a decision to mine.

Based on the outstanding exploration results and recent high grade discoveries, further drilling is required to ensure these new zones of potential high grade mineralisation are adequately defined. In light of this exploration success the DFS is expected to be extended into the 3rd quarter of 2017 to ensure the mine plan is optimal.

CORPORATE

Board Restructure

On 13 February 2017, Kin announced a board restructure as part of its preparations for development and production at the LGP.

Under the restructure, Managing Director Mr Trevor Dixon was appointed Non-Executive Chairman, replacing Mr Terry Grammer, who resigned from the Board. Chief Executive Officer, Mr Don Harper, was appointed Managing Director and highly experienced metallurgist, Mr David Sproule, was appointed Non-Executive Director replacing Mr Fritz Fitton. The restructure was designed to provide Kin with the additional operational skills and the technical experience required as it moves towards project development and production.

Share Purchase Plan

During the quarter, the Company invited eligible shareholders to participate in a share purchase plan (SPP).

Shareholders on the Kin register on 10 February 2017 (Record Date), with a registered address in Australia or New Zealand were entitled to participate. The purpose of the SPP was to place Kin in a position to fast track the LGP DFS, secure opportunistic infrastructure acquisitions as they arise, and provide additional working capital. The SPP allowed shareholders to each acquire up to \$15,000 worth of shares at 20 cents with one free option (exercisable at 40 cents) for every two new shares subscribed for and issued.

Subsequent to the March 2017 quarter, Kin announced it had raised approximately \$1.3 million from the SPP, which closed on 7 April 2017. The Company will keep the market informed on developments in relation to the placement of the shortfall.

Placement

On 28 February 2017, Kin announced the completion a placement to Sophisticated and Professional Investors pursuant to s708 of the Corporations Act raising A\$750,000 from the issue of 3,750,000 at 20 cents to assist the Company with its ongoing development strategy at the Leonora Gold Project prior to the dispatch and finalisation of the Share Purchase Plan (SPP) to existing eligible shareholders.

The placement was done on the same terms as the SPP. The issue of the options is subject to shareholder approval and the Company is currently finalising a Notice of Meeting to obtain the necessary approvals.

Marketing and Presentations

As part of the Company's ongoing marketing objectives, Kin presented at the RIU Explorer's conference in Fremantle, Western Australia. A copy of the presentation was lodged on the ASX and the Kin website on 23 February 2017.

During the June 2017 quarter, the Company will present at the RIU Sydney Resources Round Up on 11 May 2017.

About Kin Mining

Kin Mining NL (ASX: KIN) is an emerging gold development company with a significant tenement portfolio in the North-Eastern Goldfields of Western Australia. The immediate focus of the company is the (100% Kin), Leonora Gold Project (LGP) which contains a JORC resource of 721 koz Au.

Kin's priority is to complete a Feasibility Study for the LGP by mid-2017. Drilling is in progress with the objective of converting the Inferred Mineral Resources in the mine plan to Indicated Mineral Resources. Metallurgical, geotechnical, and environmental work is currently underway to support the Definitive Feasibility Study, which will form the basis for a decision to mine.

Competent Persons Statement

The information contained in this report relates to information compiled or reviewed by Paul Maher who is a member of the Australasian Institute of Mining and Metallurgy (AusIMM) and Mr. Simon Buswell-Smith who is a Member of the Australian Institute of Geoscientists (MAIG), both are employees of the company and fairly represent this information. Mr. Maher and Mr. Buswell-Smith have sufficient experience of relevance to the styles of mineralisation and the types of deposit under consideration, and to the activities undertaken to qualify as Competent Persons as defined in the 2012 edition of the "JORC Australian code for reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr. Maher and Mr. Buswell-Smith consent to the inclusion in this report of the matters based on information in the form and context in which it appears.
